## Support, the next level

**We keep your textiles moving**

### Introducing the CLMTextfinity Service

In 2010, CLMTextfinity made a promise: to personally ensure the safety, reliability and functionality of every machine – without compromise. And they signed their name to it.

This vow is more than ever alive today through our dedicated and passionate people. And we're building upon their personal commitment with investments in new technology.

Our name is CLMTextfinity – and count on our next level service

### **A more personalized experience**

We put you and your customers at the center of everything we do

#### **Personalized contracts**

Flexible service packages offer maintenance and connectivity options to suit your needs.

#### **Custom notifications**

Easily customise your communication preferences to access real-time notifications and simplified, faster reporting.

#### **Event alerts**

Event-driven alerts keep you in the loop on important updates about your equipment.

#### **Academy**

Tailor made education for your technicians help you avoid downtimes, increase product lifespans and plan for the future.

# Support the next level

We are committed to being easy to do business with. That means giving you a single place to find all the information you need when you need it. Contact our teams directly via phone, chat or email, and track maintenance and equipment health in real-time.

Gas or steam heated

## Speed

### Fast Drying leads to Short Drying Cycles

Thanks to advanced engineering and the use of intelligent technology, the S.dry-p is a top performing and versatile machine, tuned for high production laundries.

- Very short drying times are possible due to a unique and patented air flow design
- Also the inner drum with the 5 mixing ribs (improving the linen flip efficiency) and the large area punching design makes the S.dry-p extremely efficient and reduce the entanglements

## Quality

### Advanced Technology and Drying Perfection

Our continuous efforts in maximising the reliability of the S.dry-p has led to a robust design with top quality parts. This results in the excellent drying proces and extends the lifetime of the S.dry-p.

- The inner drum is made of solid stainless steel 304. The high temperature resistant drum drive is controlled by a frequency inverter
- A thermostatic safety sprinkler system is standard integrated in each dryer
- For the steam dryer, the machine uses a stainless steel heater with a long-lasting 3-layer design
- The Japanese TLV steam trap of superior quality leads to a high drying performance and saves energy

## Flex

### The Art of Flexibility

Continuously listening and learning from our customers made the S.dry-p highly flexible, adaptable to specific needs, and easy to customise and integrate into existing installations.

- The S.dry-p is a universal dryer, which can be used for pre drying, shaking out and full drying a wide variation of items (towels, laminates, blended fabrics, micro-fibre fabrics, special articles, etc)
- Flexible drying programs for all kinds of linen by easily programmable PLC-control
- The rotation speed of the drum is controlled by means of a frequency inverter
- Different machine heights (feet) with safety cover are possible
- Due to the modulated gas burner, input temperatures can be set per recipe to allow optimum drying temperatures depending on fabric

## Internet of Things

Taking full advantage of the interconnectivity, the S.dry-p dryers became cyber-physical solutions, continuously streaming data, leading to more automation, machine learning and real-time information.

- Selection of the recipe via client, or connected with batch washer/press and/or shuttle
- Integrated in the complete washing line (batch washer, press, shuttle, ...)
- Storage of production data
- Connection with central database
- Operation/service/productivity via smartphone or tablet

Easy access maintenance

Robust construction

## Keep it Simple & Straightforward

Keeping it simple, the design of the S.dry-p and its user interface makes it easy to understand, easy to use and easy to maintain. Using standard parts, widely available surely helps.

- 100 recipes
- 10-inch color responsive touch screen of high resolution and straightforward menu structure makes generating and changing programs effortless
- Simple and clear menu structure
- Simple maintenance and easy access !
- Standard parts widely available

## **Smart** Dry Smart !

Making the S.dry-p more and more intelligent lowers the need for complex adjustments and corrects human errors. Smart machines interconnect, optimise the use of resources and generate the information you need, when you need it.

- The tilting structure for unloading makes the separation of the tangled linen much easier
- The teflon coating on the inside drum makes cleaning easier as it avoids the sticking of plastic inside the drum. It is also softer and better for the linen
- Discover S.pulse: efficiency/productivity numbers shown on a large display
- The smart engineered airflow stream assures avoiding hot spots on the drum which helps reduce the sticking of plastic in the drum
- Lint removal device
- Automatic and central lint collector

## **Eco** Nature-Friendly

A well-thought design lowers the need of energy and air, leading to savings for our customers and reduces the ecological footprint.

- Unique patented duct design for hot air recycling highly improves the efficiency
- The external drum insulation of 100% pure wool felt is extremely important for the good heat preservation
- Part of the exhaust hot air is also recycled and controlled by the ventilation door
- The modulated gas burner assures optimum drying efficiency depending on the phase in the drying cycle
- Optional external heat exchanger for preheating fresh air using residual heat from the exhaust of the dryer. This will further boost the energy efficiency of the dryer !

## Technical Specs

	Steam Heated	Gas Heated
Loading capacity:	60/120 kg	60/120 kg
Connected load	13,2 kW	17,2 kW
Power consumption	10 kWh	13 kWh
Steam pressure	4-7 Bar	
Dimensions 60kg	2.944 x 2.280 x 2.690 mm	
120kg	3.010 x 1.893 x 3.940 mm	
Weight	2.300 kg	3.300 kg

**CLMTexfinity** designs, develops, manufactures, implements and services a full range of industrial laundry solutions.

Our customers range from industrial laundries and textile rental suppliers as well as hospital and hotel on-premise laundries.

The equipment is constructed in our 3 production factories in China, covering around 133.000 square meters of working space.

Customers highly value our strict standards in production, people and quality management according to ISO9001 norms and we are experienced in both Western and Asian industry cultures, standards and languages.

## Our range of products consists of:

### Category

#### ● Wash & Dry

### Name

- S.wash-t** Tunnel washer
- S.press** Water extraction press
- S.dry-p** Passthrough dryer
- S.wash-e** Washer-extractor
- S.dry-f** Front loading dryer

#### ● Sort & Handle

- S.bag** Bag system
- S.belt** Conveyors washroom
- S.load** Loading conveyors
- S.trans** Conveyors finishing
- S.control** Control systems
- X.pack** Packing machine

### Category

#### ● Full Dry Finish

### Name

- S.towel-a** Air towel folder
- S.omni-a** Air multi folder

#### ● Flatwork Finish

- S.grab** Picker
- S.feed-s** Automatic feeder
- S.feed-m** Manual feeder
- S.feed-r** Remote feeder
- S.iron-c** Chest ironer
- S.fold-l** Folder large pcs
- S.fold-s** Folder small pieces
- S.fold-m** Folder multi lane
